

DATA SHEET

OVERVIEW

HCV Seroconversion Panel PHV928 (genotype 1a) is a 9-member panel of undiluted, naturally-occurring plasma samples, collected in the United States over 50 days in 2007 from a 38-year old male. No preservatives were added.

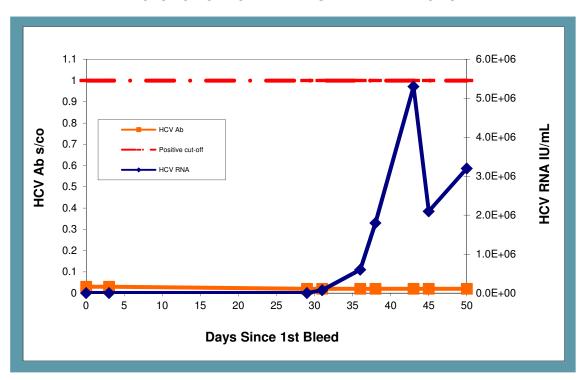

Test results from commercially-available HCV RNA, antibody, genotype, and antibody confirmatory assays are included. The Innogenetics INNO-LIA HCV Score antibody confirmatory assay is included to replace the discontinued Chiron RIBA 3.0 HCV antibody confirmatory test, providing users with the opportunity to view performance from another commercially available kit.

For Research Use Only. Not for use in diagnostic procedures. Data are provided for informational purposes. SeraCare Life Sciences does not claim that others can duplicate test results exactly.

CAUTION: Potentially infectious materials. Follow Universal Precautions. Some panel members were found positive for anti-HCV; all were found negative for HBsAg and anti-HIV.

For assistance, contact SeraCare Technical Support at 508.244.6400.

EVOLUTION OF HCV MARKERS IN EARLY INFECTION

This graph demonstrates the evolution of early HCV infection, illustrated with Abbott ARCHITECT HCV Antibody and Abbott m2000 HCV RNA test results over time for different analytes or analyte combinations.

PHV928 DATA SHEET

HCV RNA
