| <b>Description:</b>          | The Onco-Ref™ Genomic DNA Reference Standard represent biologically-relevant controls that can be directly incorporated into your sample processing workflows in order to optimize your protocols, evaluate assay sensitivity and specificity, and analyze the impact of workflow changes on downstream analysis. It is an ideal material for both assay development and routine monitoring of assay performance.                                                                                                                                                                                                            |
